ABOUT ME

Python Backend Developer with experience building scalable web applications, REST APIs, and real-time systems using **Django**, **Django REST Framework**, and **FastAPI**. Passionate about designing reliable backend architectures and developing AI-powered applications by integrating modern LLMs and AI services into production-ready systems. Skilled in **Python**, **PostgreSQL**, **Redis**, **Celery**, **Docker**, and **WebSockets**, with a growing focus on **Retrieval-Augmented Generation (RAG)**, **Vector Databases**, **AI Agents**, and building intelligent, production-ready AI applications.

Education

Bachelor of Science in Computer Science (BSCS)
Currently in 7th Semester
University of Education, Faisalabad Campus

Skills

Backend	Languages	Frontend
- Django(DRF) - FastAPI - JWT Authentication - REST APIs - Redis - Celery	- Python - Javascript DataBase - PostgreSQL - MySQL	- HTML - CSS - Tailwind CSS - React JS

Tools

|--|--|

Experience

Back-End AI Engineering Intern | FlyRank

July 2026 – Present

- Contributed to the development of AI-powered backend systems and applications.
- Worked with Python-based backend technologies and modern AI workflows.
- Assisted in integrating AI capabilities into production-oriented software solutions.
- Collaborated with engineers to build scalable and maintainable backend services.
- Gained hands-on experience with AI engineering concepts, LLM-powered applications, and intelligent system design.

Projects

Carvo – Car Rental Booking System [Github Repo Link](#)

- Built backend APIs for a car rental booking website using Django and DRF
- Added car listing and car booking features
- Integrated PayPal payment gateway for online payments
- Implemented user authentication and booking management
- Used Redis and Celery for background task processing

Movixra – Movie Ticket Booking System [Github Repo Link](#)

- Built backend APIs for a movie ticket booking system using Django and DRF
- Added movie shows and seat booking features
- Implemented booking management and user authentication
- Designed APIs for smooth booking workflows
- Used Redis and Celery to improve task handling and performance

MobXStore – eCommerce Backend System [Github Repo Link](#)

- Built backend APIs for an eCommerce application using Django and DRF
- Added product, cart, and order management features
- Implemented user authentication and order workflows
- Designed APIs for handling shopping cart operations
- Used Redis and Celery for background task processing

Certificates

• **Django Web Framework – Coursera**

- Completed training in Django development, models, views, templates, authentication, and RESTful web application concepts.

• **Building with Claude – Anthropic**

- Learned Claude API integration, prompt engineering, tool use, AI workflows, Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), and the fundamentals of building AI-powered applications and agentic systems.
